

Do science with Flo

1

I ask a question.

2

I make a hypothesis.

What are my predictions?
What will happen and why?

3

I plan my experiment.

What equipment do I need?
What steps do I need to follow?

4

I conduct my experiment.

I perform all the steps of my experiment.
I observe the results.

5

**I look back at my hypothesis
and answer the question.**

What is the answer to my question?
Was I right?
Why or why not?
