

Buckle your seatbelts, we're going for a ride!

Discover the physiographic regions of Quebec

primaire

3-6

secondaire

1-2

Help your child get familiar with the three physiographic regions of Quebec by playing this fun game!

Instructions :

Print the worksheet and ask your child to match each feature to the corresponding region.

You can also take turns answering, or get the whole family to join in the fun!

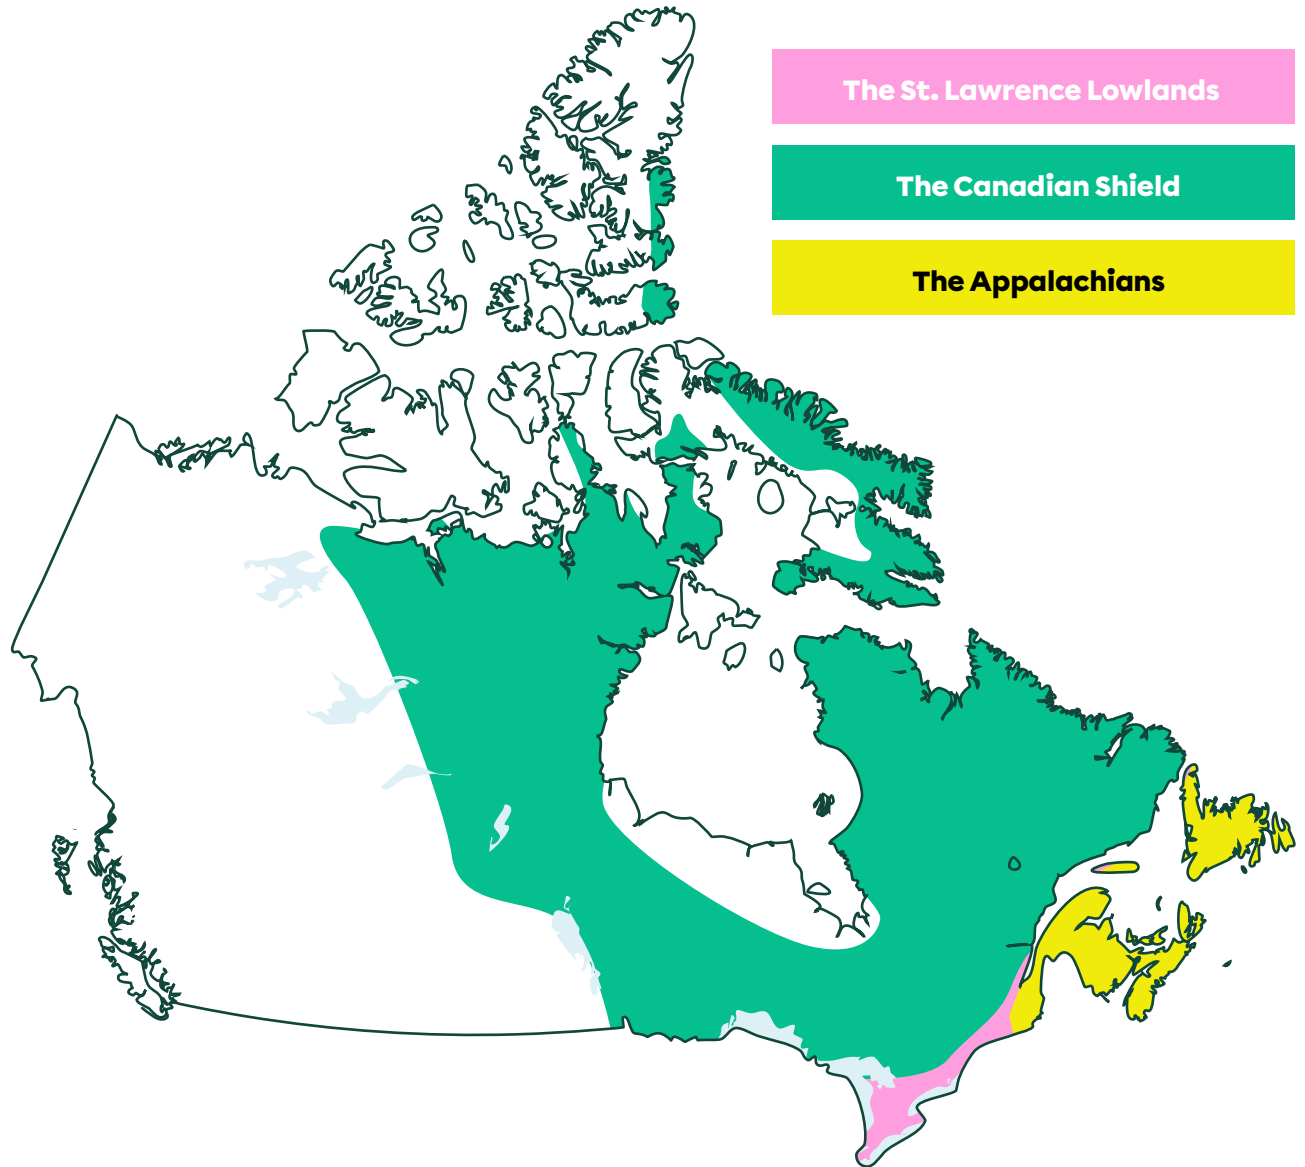

1/4

If they're stuck, your child can refer to our revision page about the physiographic regions of Québec on alloprof.qc.ca (French only).

Head to alloprof.qc.ca/en for more resources.

Cut out the statements below

I am the most populated physiographic region.

I am rich in mineral and hydroelectric resources.

I have an average altitude of 500 metres.

During the ice age, I was covered in glaciers.

I am home to the Chic-Choc Mountains.

I cover 90 percent of Quebec's territory.

My mountains are between 115 and 550 million years old.

I have a few mountains, but I am mostly flat.

I cover a territory that extends beyond the borders of Quebec.

I am rich in the following mineral deposits: silica, sand, limestone, clay, and gravel.

I have one of the greatest freshwater reserves in the world.

I have a flat terrain that's good for agriculture.

I am made up of rocks that are 970 million to 2 billion years old.

My soil is prized for its peat deposits and minerals such as salt and asbestos.

I have an area of 17,000 square kilometres.

The St. Lawrence Lowlands

I have an area of 17,000 square kilometres.

During the ice age, I was covered in glaciers.

I have a flat terrain that's good for agriculture.

I am the most populated physiographic region.

I am rich in the following mineral deposits: silica, sand, limestone, clay, and gravel.

The Canadian Shield

I cover 90 percent of Quebec's territory.

I am made up of rocks that are 970 million to 2 billion years old.

I have one of the greatest freshwater reserves in the world.

I am rich in mineral and hydroelectric resources.

I have a few mountains, but I am mostly flat.

The Appalachians

My mountains are between 115 and 550 million years old.

I cover a territory that extends beyond the borders of Quebec.

I have an average altitude of 500 metres.

I am home to the Chic-Choc Mountains.

My soil is prized for its peat deposits and minerals such as salt and asbestos.
