## Solids:

#### 

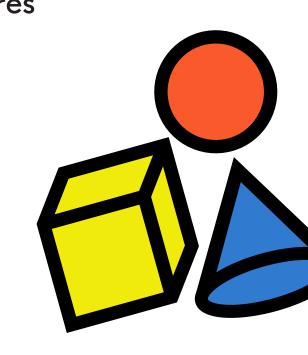

### **Area and Volume Formulas**

The **area of the base**, generally denoted  $A_b$ , is the surface occupied by the figure or figures that serve as a base for the solids.

The **lateral area**, generally denoted  $A_L$ , is the surface occupied by the figures that do not serve as the base for the solids.

The **total area**, generally denoted  $A_{\tau}$ , is the total surface covered by all the figures that make up the solid.

The **volume**, generally denoted V, is the measure of the three-dimensional space a solid occupies. Volume is calculated in cubic units ( $u^3$ ).

	Solid	Area Formulas	Volume Formulas
<u>Cube</u>	s	$\mathbf{A}_{b} = s^{2}$ $\mathbf{A}_{L} = 4s^{2}$ $\mathbf{A}_{T} = 6s^{2}$	$V = S_3$
<u>Prism</u>	h	$\mathbf{A}_b$ = formula associated with the figure $\mathbf{A}_L = \mathbf{P}_b \times \mathbf{h}$ $\mathbf{A}_L = \mathbf{A}_L + 2\mathbf{A}_b$	$\mathbf{V} = \mathbf{A}_b \mathbf{x} \mathbf{h}$
<u>Pyramid</u>		$\mathbf{A}_b$ = formula associated with the figure $\mathbf{A}_L = \frac{\mathbf{P}_b X \alpha}{2}$ $\mathbf{A}_T = \mathbf{A}_L + \mathbf{A}_b$	$V = \frac{A_b x h}{3}$
